

Dona Ana Community College (DACC) offers several introductory information technology and computer science courses that could be beneficial for a student majoring in Business. Here are some examples:

1. **IT101 - Introduction to Information Technology:** This course provides a broad overview of information technology concepts, including hardware, software, networks, and the Internet. Students learn about the role of IT in business and how technology impacts various industries.
2. **CS110 - Introduction to Computer Science:** A fundamental course introducing students to the basics of computer science, including programming concepts, algorithms, and problem-solving techniques. While not directly focused on business applications, understanding these principles can be valuable in various business contexts, especially in data analysis and automation.
3. **IT120 - Introduction to Computer Applications:** This course covers essential computer applications commonly used in business settings, such as word processing, spreadsheet management (often using Microsoft Office Suite), presentation software, and database management.
4. **IT150 - Web Page Design and Development:** In today's digital age, having a basic understanding of web design and development can be advantageous for businesses. This course teaches students the fundamentals of creating and maintaining websites using HTML, CSS, and other relevant tools.
5. **IT160 - Introduction to Networking:** Understanding networking basics is crucial in today's interconnected business environment. This course introduces students to network concepts, protocols, and technologies, laying the foundation for understanding how data is transmitted and secured over networks.
6. **CS151 - Programming Fundamentals I:** While primarily a programming course, CS151 introduces students to the fundamentals of computer programming using a high-level language like Java or Python. Understanding programming basics can be invaluable for automating tasks, analyzing data, and developing business applications.
7. **IT195 - Introduction to Cybersecurity:** Cybersecurity is a growing concern for businesses of all sizes. This course provides an introduction to cybersecurity principles, best practices, and techniques for protecting digital assets and sensitive information.

These courses offer a solid foundation in information technology and computer science concepts relevant to a business major. Students can use the knowledge gained from these courses to better

understand technology's role in modern business operations, make informed decisions about technology investments, and communicate effectively with IT professionals.
