While Northern New Mexico College primarily focuses on programs related to nursing and criminal justice, they also offer introductory courses in computer science (CS), electrical engineering and computer engineering (EECE), electrical engineering technology (EET), and information technology (IT) that might interest students pursuing major in criminal justice. Here are some introductory courses that could be relevant:

1. **Computer Science (CS)**:
   - Introduction to Computer Science
   - Programming Fundamentals
   - Introduction to Algorithms and Data Structures
   - Introduction to Web Development
   - Introduction to Database Systems

2. **Electrical Engineering and Computer Engineering (EECE)**:
   - Introduction to Electrical Engineering
   - Introduction to Circuit Analysis
   - Introduction to Digital Logic Design
   - Introduction to Embedded Systems
   - Introduction to Microcontrollers

3. **Electrical Engineering Technology (EET)**:
   - Introduction to Electronics
   - Introduction to Electrical Circuits
   - Introduction to Control Systems
   - Introduction to Power Systems
   - Introduction to Telecommunications

4. **Information Technology (IT)**:
   - Introduction to Information Technology
   - Introduction to Networking
   - Introduction to Cybersecurity
   - Introduction to Operating Systems
   - Introduction to Cloud Computing

These courses can provide foundational knowledge in technology-related fields, which can be beneficial for students majoring in nursing and criminal justice as they increasingly rely on technology for data management, analysis, and communication. Additionally, understanding the basics of technology can also be advantageous for career advancement and interdisciplinary collaboration in healthcare and law enforcement settings. However, it's essential for students to consult with their academic advisors to ensure that these courses fit within their degree requirements and align with their career goals.
