

**Who needs FREE great materials to enhance or create an amazing cybersecurity course? Learn what RING cybersecurity curriculum has to offer!**

**Description:**

**RING** (Regions Investing in the Next Generation) is an online high school cybersecurity curriculum available for all educators at no cost. The curriculum was developed through grants by the NCAE-C program office located at the National Security Agency. It consists of 180 content hours and includes detailed lesson plans, instructional slides, activities, hands-on labs, graphic organizers, games, assessments, and a sample pacing guide. The curriculum has been vetted by Center of Academic Excellence (CAE) in Cybersecurity colleges and universities and was created and mapped to the National Cryptologic Foundation Cybersecurity Curriculum Guidelines and CAE Cybersecurity Foundational Knowledge Units.

Come to this session to receive an overview of the curriculum, get free access to the curriculum that you can download into your own LMS, and walk through some of the fun learning activities. Your students, parents, and administrators will thank you for implementing this fun and engaging curriculum.

This session will give an overview of the RING curriculum and how CAE's and administrators can support local K12 cybersecurity education through the promotion and adoption of this curriculum. There will also be a demonstration of the RING curriculum and its various features.
