If you're majoring in Theatre at Central New Mexico and want to explore introductory courses in information technology (IT) and computer science, here are some options you might consider:

1. **Introduction to Computer Science (CS 1510)**: This course provides a broad overview of computer science concepts, including programming fundamentals, algorithms, and data structures. It's a great starting point for students with little to no background in computer science.

2. **Introduction to Information Technology (IT 1010)**: This course covers the basics of information technology, including computer hardware and software, networking, cybersecurity, and the role of IT in business and society.

3. **Digital Media (IT 1450)**: This course focuses on digital media technologies, such as graphics, audio, video, and animation. It could be particularly relevant for Theatre students interested in multimedia production or digital design for stage productions.

4. **Web Development Fundamentals (IT 2380)**: This course introduces the principles and tools used in web development, including HTML, CSS, and JavaScript. Understanding web development basics could be useful for Theatre students interested in creating online portfolios or promoting their work on the web.

5. **Introduction to Programming (CS 1520)**: This course delves deeper into programming concepts introduced in the introductory computer science course. Students typically learn a programming language such as Python or Java and explore topics like control structures, functions, and object-oriented programming.

6. **Computer Applications for Business (IT 1150)**: This course covers common business applications such as word processing, spreadsheets, databases, and presentation software. While more focused on business applications, it could still provide valuable computer skills for Theatre students, especially those interested in arts administration or management roles.
