

For a student majoring in Social Work at NMSU Alamogordo, they might not have many requirements for Computer Science (CS) or Electronics Technology (ET) courses. However, if they're interested in gaining some foundational skills in these areas, they could consider the following introductory courses:

Computer Science (CS):

1. **CS 110: Introduction to Computer Science** - This course provides a basic understanding of computer systems, programming, and the use of software applications.
2. **CS 120: Introduction to Programming** - Focuses on basic programming concepts using a high-level programming language.

Electronics Technology (ET):

1. **ET 110: Introduction to Electronics** - Covers basic electronics concepts and principles, including circuit theory and electronic components.
2. **ET 120: Basic Electronic Circuits** - Provides hands-on experience with designing and testing simple electronic circuits.

These courses can be beneficial for developing technical skills that might be useful in various contexts, including social work, where technology plays an increasingly important role.
